

Summary

The present invention pertains to an anti-virus agent acting against single stranded RNA
5 viruses. In particular, the present invention relates to an anti-virus agent containing a
construct comprising a nucleotide sequence derived from the single stranded virus and
capable to direct the synthesis of the (-) strand and a gene encoding a toxin operably linked to
a regulon, wherein the gene encoding the toxin is oriented antisense-in the construct. The
present invention also pertains to the use of said anti-virus agent for preparing a medicament
10 for treating viral diseases.
